Environmental Management Statement

Exhaust gases generated during the company's production are effectively collected and treated through efficient treatment measures to ensure that pollutants emitted meet national and local standards, reducing their impact on the atmosphere.

encourage employees to consciously comply with safety rules and regulations, enhance safety awareness, and improve corporate safety culture.

During production, the company promotes the resource utilization of waste, realizes waste recycling, reduces waste generation, and improves resource utilization.

The company implements classified collection and standardized disposal of solid waste, actively promoting the reduction, harmlessness, and resource utilization of solid waste. Most general solid waste is entrusted to qualified entities and technical capabilities for resource utilization; if resource utilization is not possible, disposal is entrusted to legally compliant units; Hazardous waste is entrusted to qualified units for disposal.

During the product design phase, the company considers low-carbon design, prioritizing environmentally friendly materials and low-energy consumption designs. Promote improvements in product energy efficiency and environmental performance, reduce resource consumption and environmental burden.

In the future, the company will promote the recycling of product materials to reduce resource waste and environmental pollution.

The company will regularly review and evaluate the implementation of this
